SUMMARY

Web Developer experienced in Python, C#/.NET, and MEAN stacks, I am a dedicated and motivated student that is eager to learn any skills needed to contribute to the team. With over eight years of experience in the healthcare industry as a Caregiver Administrator, I am capable of completing several difficult tasks and effectively communicate with my team. I am a problem-solver seeking opportunities to work as a software/web developer where I can continue to expand my knowledge and skill set while providing value to the company.

PROJECTS

Marketplace App: iLenders

Link: [Code](#)

iLenders is a marketplace app made in collaboration of 5 developers. It allows users to post items that can be lent and or sold. This app was made to be a middleground for users that did not want to fully commit to buying items that they would use for a short period of time. My team made components such as login/registration, I was responsible for integrating Google Maps API to display item location for pick up and details.

- MEAN, Google Maps API, Sequelize, REST API, Socket.io, GitHub

Discord Bot: CDojoBot

Link: [Code](#)

Custom Discord bot that can perform an array of commands. This chatbot can create an interactive experience between two users to participate in a game of roshambo. The chatbot was made to explore the idea that several communities would want a customized chatbot to meet their specific needs such as moderating and other activities that are not already provided.

- C#, ASP.Net Core, DSharpPlus, Discord API

Restaurant Randomizer: Ya Yeat

Link: [Code](#) | [Demo](#)

Web application that randomly picks a restaurant in a 5 mile radius of the inputted location. There are several food choices that may overwhelm people so this app is meant to help alleviate that process by making the choice for them.

- Python, Django, and Yelp API

Agile Project Management App: Issue Tracker

Link: [Code](#)

This is a kanban board application where users can either create tickets or assign tickets to other users. The users that are assigned to a certain task can update the status of the ticket as well as view other tickets and track their progress on the board. This app assists the development process by giving a visual representation of each step.

- C#, Razor, ASP.net Core, Entity Framework Core, Materialize

EDUCATION

B.A. Psychology

[University of California, Irvine](#)

September 2015 - September 2017

Certificate Web Development

[Coding Dojo, Costa Mesa](#)

August 2019 - November 2019

SKILLS

Python C# JavaScript
TypeScript HTML5 CSS3
jQuery Bootstrap
Materialize Sqlite MySQL
NoSQL(MongoDB/ Mongoose)
Django Flask
Entity Framework ASP.Net
Angular Express React
MVC/MTV REST API ORM
OOP Agile CRUD AWS
Node.js Postman
Git/GitHub Photoshop
Illustrator Premiere Pro

EMPLOYMENT

Administrative Caregiver

[JAIRE Home Inc., Anaheim](#)

August 2011 - August 2019
