PROJECTS

HavensHearth: Community Resiliency App
Cloud FireStore, Node.js, Express.js, Firebase, React, Google Maps Api, Google Auth, BitBucket, Heroku
Live Site
- Utilized Cloud Firestore, React, Google Maps API for a dynamic user experience.
- Incorporated Firebase database and functions to sync and store data in real time help users to collaborate with one another.
- Deployed Application frontend on Firebase and backend Heroku to provide better security for user's information.

Discord Bot: ScheduleBot

Javascript, Node, DiscordJS, Discord API, Moment.js, MongoDB, Mongoose
GitHub
- Employed Discord JS to interact with Discord's API, resulting in an easier and readable code when creating custom commands.
- Created models for users, clock ins and outs, and status that are stored in a MongoDB. Used these models to calculate hours of a given time range.
- Utilized MongoDB for its horizontal scaling as well as to retrieve data for calculating schedules.
- The Bot is used by Creator's Guild for their team-based work management.

Restaurant Randomizer: Ya Yeat
Python, Django, and Yelp API
GitHub | Live Site
- Web app that gives a user a random selected restaurant that is in a 5 mile radius from an inputted address.
- Integrated Yelp's API to get JSON data of available restaurants.
- Added a redirect for use cases where there was a location not available.

Agile Project Management App: Issue Tracker
C#, Razor, ASP.net Core, Entity Framework Core, Materialize, jQuery, MySQL
GitHub
- Utilized ASP.Net Core and Entity Framework Core to make a web app kanban board.
- Used Materialized and jQuery to create an interactive UI for the user to modal details of each issue as well as a search feature for given tasks.
- Used SQL database to create relational data for level of users rights, as well as for issuing a ticket to a specific user.
